GLAZED STAINLESS STEEL

Fitzpatrick^{S.A.L.}

GLAZED STAINLESS STEEL

Fitzpatrick s.a.l. Metal Works & Fire Rated Doors is a Lebanese company that started its operation in 2000 under the manufacturing license from Fitzpatrick Doors Ltd U.K.

Since its launch in Lebanon, Fitzpatrick built its reputation as a leader in the production of metal works and fire rated doors and partitions.

Due to the growing market needs, the Glazed Stainless Steel department was launched in 2007 complementing the Metal Works division. This new division specializes in metal and glazing works for the architectural and decorative domains.

In the short period since its launch, our company was commissioned by acclaimed architects to produce several

landmark projects within Beirut and neighboring cities.

The high quality of our work speaks for itself. From grandiose exterior facades to the most intricate interior details, we promise to deliver high quality service and finishing products.

Such fine workmanship is accredited to our highly skilled metal workers who have extensive experience in the domain of architectural metal works.

Our products range across the following categories:

- Cladding of Columns (circular, and straight), canopies, skylights, and other general architectural products.
- Access and railing products, including handrails, balustrades, partitions, and gates.

- Structural steel such as walkways, skylight, canopies, staircases, and glass parapets.
- Custom-made products, including furniture, desks, and a wide range of architectural and decorative fittings designed and manufactured to client specifications.

Our team takes great pride in fulfilling the market's needs, and in executing complex and challenging projects with great ease.

We invite you to explore some of our creations.

FITZPATRICK BUSINESS APPROACH

At Fitzpatrick Glazed Stainless Steel, we walk our clients through every stage of the process, and liaise closely with all departments involved to make sure the entire process is as smooth and efficient as possible.

This approach guarantees that projects are completed according to the designer's requirements, in minimal time, and to superior finish quality.

The process begins with the project concept that is presented to us by the architectural designer. Based on this brief, we provide the initial cost estimation.

Next, our in-house design team translates the provided concept into a design that is ready for execution. Upon approval, we then begin the

executional phase which includes the fabrication and installation of the project.

Our highly experienced teams of erectors carry out the installation process under strict supervision of field engineers. The result is a high quality product directly representative of the designer's vision and executed to the finest standards.

At every juncture in the process, communication is kept open between the company and client to ensure that any modifications are streamlined into the process as efficiently as possible.

Our workshops have been furnished with high precision equipment to reach any desired effect and quality. CNC machines support the production

processes of most of the decorative works, while material surface treatment, such as polishing and painting, are carried out to comply with the most demanding requirements.

Furthermore, we only employ premium quality raw materials and durable products from reputable suppliers. We use different grades of metal in our manufacturing, such as steel, stainless steel, bronze, and aluminum. For our finishing, we use a variety of polishing, powder coating and specialized painting systems to achieve the desired look in design and functionality.

Whatever the complexity of the design, our highly experienced engineers and metal workers will make it all come to life with superior quality and workmanship.

STAINLESS STEEL CLADDING COLUMN CLADDING

.01

Our team at Fitzpatrick Glazed Stainless Steel has become a leading manufacturer of metal cladding.

Our highly skilled production team, proactive project management, and detail-oriented approach ensure comprehensive quality and accuracy throughout the entire design, development, and fabrication process.

Our stainless steel column covers can be formed in various shapes and styles, such as round, oval, square, rectangular, tapered, and elliptical with caulked, reveal, or butt joints. They can even have incorporated top, bottom, and intermediate reveals, and be furnished with sound deadening

material applied to reduce noise on impact. The stainless steel column covers are fabricated on press breaks and roll-forming equipment as shapes require.

Stainless Steel is available in several standard finishes in a Type 304 or Type 316. Textured Stainless Steel and specialty finishes are available in addition to our standard finishes.

With such diverse flexibility, we can meet the needs of architects and designers to produce the metal cladding of choice, regardless of design complexity.

.02

STAINLESS STEEL CLADDING CLADDING

Whether for residential or commercial use, a more generic form of cladding is offered as a complement to column cladding. This type of cladding can be applied across a variety of applications, and to any object of any desired shape or design.

Examples of such applications include walkways, skylights, mezzanine edges, elevators, and furniture.

DECORATIVE RAILING SYSTEMS GLAZED BALUSTRADES

.03

We produce various types of balustrades and handrails, such as stainless steel, glazed, polished, stainless steel cable system, painted or powder coated, and galvanized – all executed with careful precision and exceptional attention to detail.

The use of glass provides a safe transparent barrier for balconies, staircases, walkways, or swimming pools whilst offering a pleasant modern feel to the surrounding area.

Even with glazed balustrading, a generous selection of options are available ranging from framed through to fully frameless designs.

Furthermore, balustrades can be glazed into a light wood or stainless steel handrail system with the aid of glass clips, clamps, or spiders.

All glazed balustrades are executed according to international building standards, and are meticulously tested for safety using rigorous impact tests to ensure that safety is always kept our fundamental concern.

.04

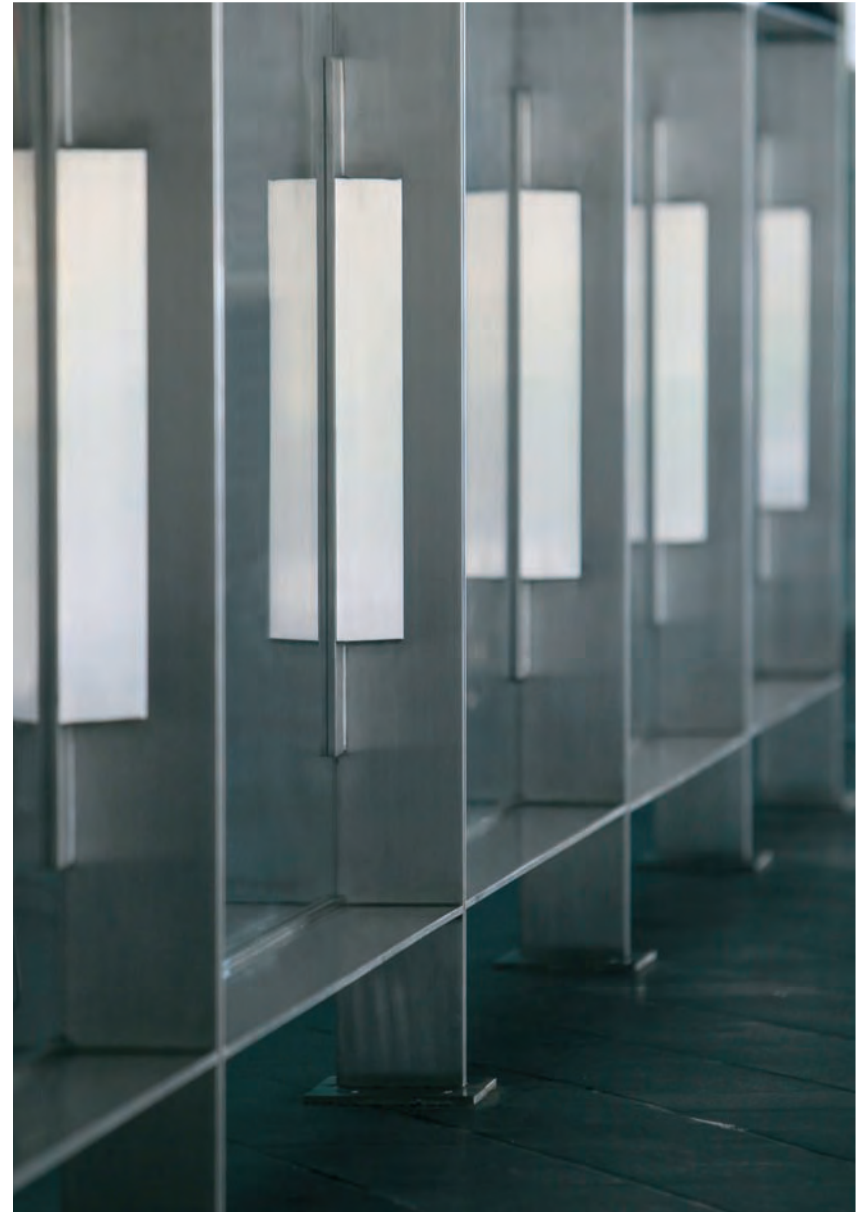

DECORATIVE RAILING SYSTEMS FENCING

Our fencing solutions can be applied to residential or commercial spaces to provide an effective and elegant barrier without adversely affecting the spacious harmony of the enclosed area.

Our fences are offered in various styles, such as frameless glazed, stainless steel, or even both combined. If required, Glass can also be replaced with Plexiglas.

In all applications, the material's unique characteristics allow its natural qualities to shine, yet whilst providing safety, strength, and a long lasting build quality.

DECORATIVE RAILING SYSTEMS STAINLESS STEEL BALUSTRADES

.05

Stainless Steel Balustrades are strong and stylish, yet completely capable of being bent and shaped to suit any architectural needs. Its malleability allows for executing several designs, such as spirals for staircases, curves for Art Deco designs, or installed flat, such as handrails for staircases or as balustrades for balconies.

The balluster posts can be made of circular tubes or flat plates, and can be connected together with round bar, cables, or tubes. The handrails themselves can also be made of stainless steel, or in timber.

Our crafted metal workers can custom-make any application of balustrades with either a natural, or painted finish.

At Fitzpatrick Glazed Stainless Steel, our stainless steel ballusters are treated to prevent unwanted tea stain effects.

The final result is not only visually elegant, but of spectacular finish quality, safe, durable, and manufactured in accordance to international building standards.

DECORATIVE STEEL STRUCTURE STAIRCASES

.06

At Fitzpatrick Glazed Stainless Steel, our engineering team and skilled craftsmen are always ready to bring your innovative ideas to life.

Whether you seek to create a standard or custom-designed stairway, unusual designs and different materials are just part of the challenge that we thrive off.

The stair's material can be made of painted steel or clad stainless steel, with treads ranging from safety glass, steel, marble fixed on steel, or wood. The stringers can even be straight, spiral, or curved. Our only limit is the designer's imagination.

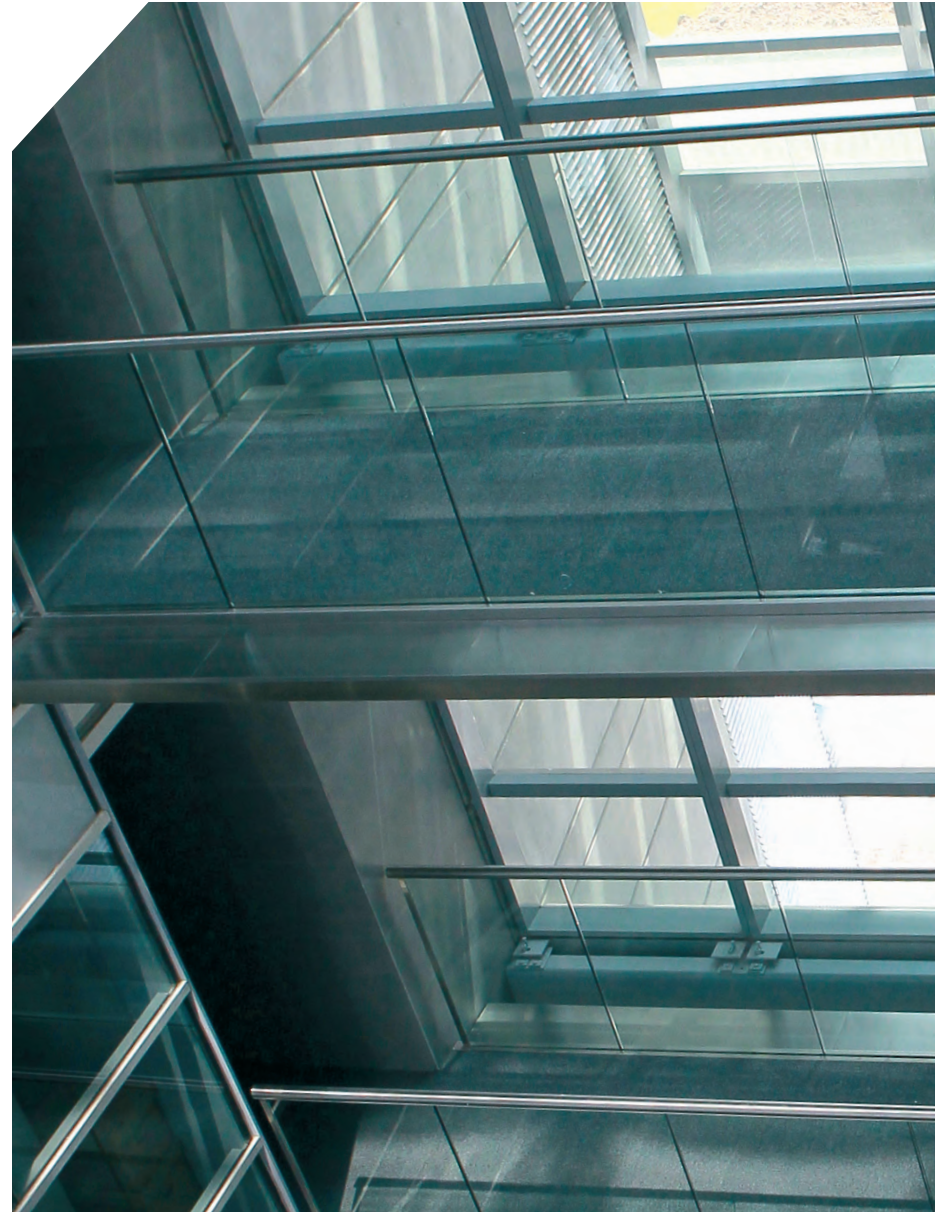

.07

DECORATIVE STEEL STRUCTURE WALKWAYS

Structural walkways are used to create a physical link between adjacent buildings for pedestrian usage. These walkways are just another way we can custom-create structural wonders based on architectural requirements.

Our design executions typically include calculations, layout designs, and shop drawings.

The construction includes a combination of different materials such as the steel structure, cladding material, and balustrades.

DECORATIVE STEEL STRUCTURE CANOPIES

.08

Canopies have become a key architectural statement for building entrances. Not only do they provide shelter and safety for tenants and visitors, but they also reduce public liability to the building owner. Furthermore, canopies help provide a visual beacon that is readily identifiable for visitors.

Our canopies can be custom designed and built to the most intricate specifications, whilst providing a solid structure that is durable and resistant to wind loads and rain.

Construction of these canopies can be offered in different materials, such as steel, stainless steel, glass, wood, composite aluminum, and polycarbonate panels.

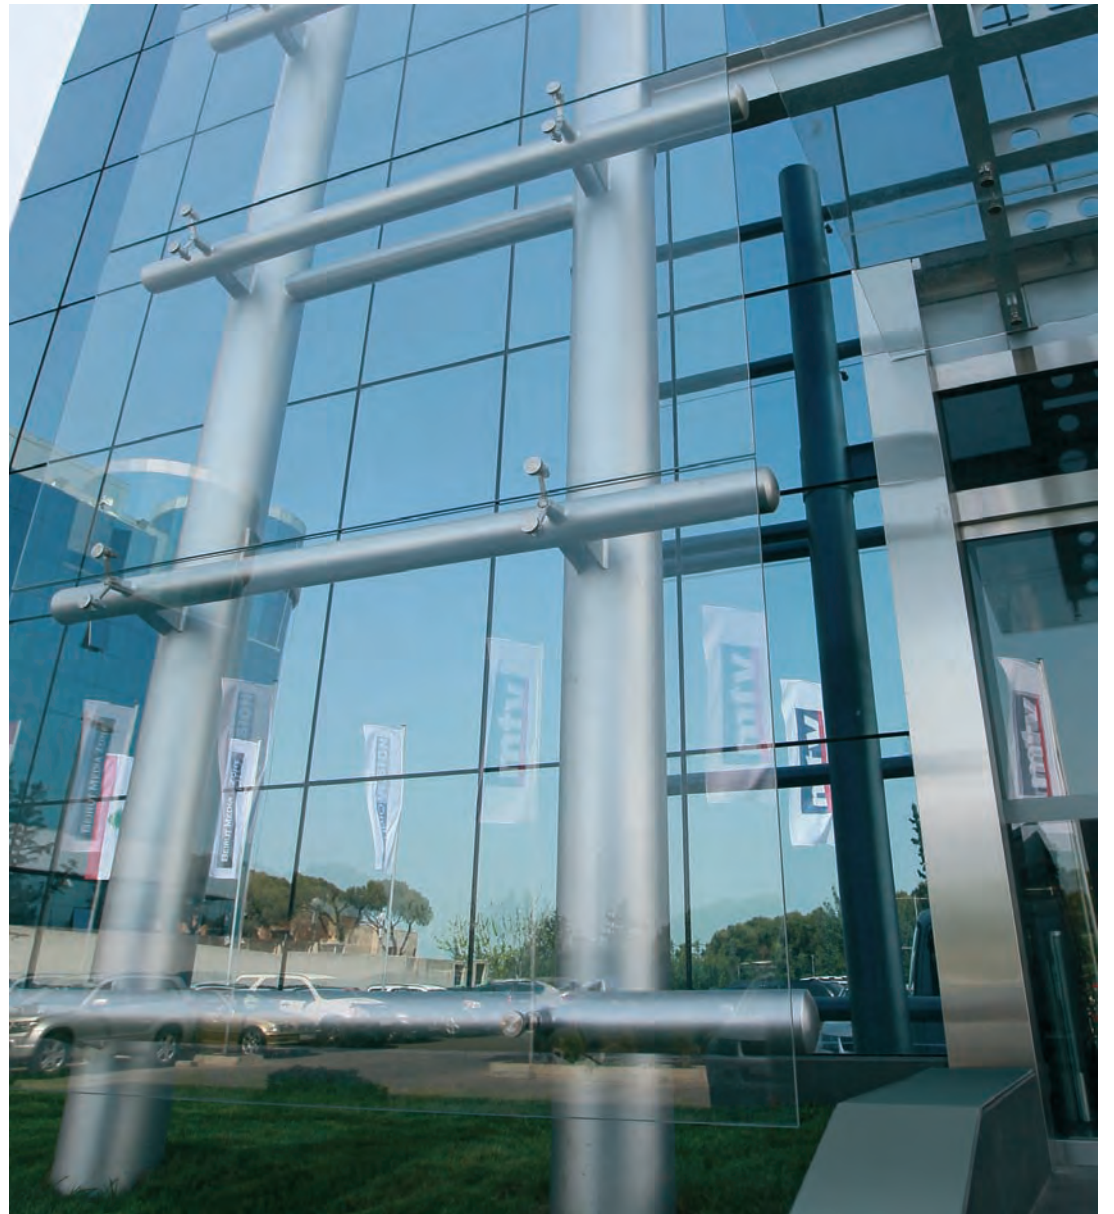

.09

DECORATIVE STEEL STRUCTURE GLASS PARAPETS

Similar to canopies, Glass Parapets pleasantly integrate with a site's architecture, and can turn buildings into identifiable landmarks for visitors and tenants.

Glass Parapets work well with glass facades and canopies, and can be custom-created to architectural requirements.

GLAZED SCREENS SHOP FRONTS

.10

As many will agree, it's all about the first impression! That's why we, at Fitzpatrick Glazed Stainless Steel, take great pride in our ability to produce high quality shop fronts with outstanding finish quality.

We work closely with our clients to ensure that their designs are accurately translated to shop fronts. Finishing details such as customized handles, stainless steel work, hardware, bulletproof glass, and glazing are all carried out with clean and careful execution.

.11

GLAZED SCREENS PARTITIONS

Our taskforce, at Fitzpatrick Glazed Stainless Steel, manufacture and install a wide range of doors and windows in various materials, such as stainless steel, aluminum-cladded stainless steel, or steel profiles.

These materials offer the following benefits:

- Transparent, elegant, esthetically pleasant, light, durable, and comfortable designs
- Complex and simple stainless steel profiles.
- Profile encasement of a combination of diverse materials, such as stainless steel/wood, stainless steel/aluminum, and stainless steel/steel.
- Certified fire rated partitions (as per international standards).
- Stainless steel accessories and handles designed for easy maneuverability and client satisfaction.
- Products are available in standard stainless steel, or painted steel, finishes.

GLAZED SCREENS ELEVATOR FRONT

.12

Combined with design excellence, we can execute elevator fronts that boast outstanding quality and safety.

Our elevator fronts are constructed using high quality fire rated stainless steel or painted steel screens.

The result is a solid structure that is not only secure, but aesthetically pleasing to all who experience its presence.

KIOSKS GLASS KIOSKS

.13

From information booths to sales boutiques, whatever the intended use, we can custom-create unique kiosks to lure in all walks of life.

These increasingly popular glass structures are built on stainless steel frames, allowing a broad view of the client's setup from all approaching angles.

Based on the design requirements, kiosks can be finished with a wood interior inside the surrounding glass walls.

CUSTOM-MADE GATES BRONZE GATES

.14

When the objective is to create a unique and visually captivating structure, designers rely on the use of different materials to achieve that goal. Bronze has recently become increasingly popular as a material of choice.

At Fitzpatrick Glazed Stainless Steel, we can easily accommodate such requests according to the designer's objectives.

We can execute custom-made designs with bronze finishes, such as sliding or folding doors, fixed windows, or as material cladded to a specific design.

CUSTOM-MADE FURNITURE NEWS DESKS

.15

What better way to complete a cutting-edge TV set than to place an extravagant, high quality news desk in the heart of it all, and who better to complete such a set than our team at Fitzpatrick Glazed Stainless Steel.

Thriving in custom-creating works of art in a combination of stainless steel, glass, or Plexiglas, we can flawlessly produce visually stunning masterpieces to complement the entire TV production.

.16

CUSTOM-MADE FURNITURE PLANTERS

At Fitzpatrick Glazed Stainless Steel, we believe that keen attention to detail must be carried through to the smaller details as well. This is why our planters boast the same high-quality execution of the rest of our creations.

Planters are executed in simple and effective various stainless steel finishes to vitalize popular public spaces. Combining the brilliance of stainless steel with the elegance of mother nature has never been so alluring.

CABINETS

FIRE HOSE CABINETS

.17

Our fire hose cabinets are built with stainless steel, and finished with stainless steel textures according to the designer's request.

If needed, we can also provide engraved writing techniques on the cabinets that are both clear and durable.

We have had the privilege of working with many esteemed architects and designers in producing renowned landmark projects.

You have just seen a brief showcase of what we can offer, and couldn't be more proud of our accomplishments to date.

We invite you to become part of the Fitzpatrick experience, and look forward to bringing your innovative ideas to life.
